LAST BETS
GUIDELINE

1. Introduction

Last Bets helps reduce business risk by monitoring running bet tickets placed by your Direct Members or by Members under your downlines, using various filters.

2. Last Bets instructions

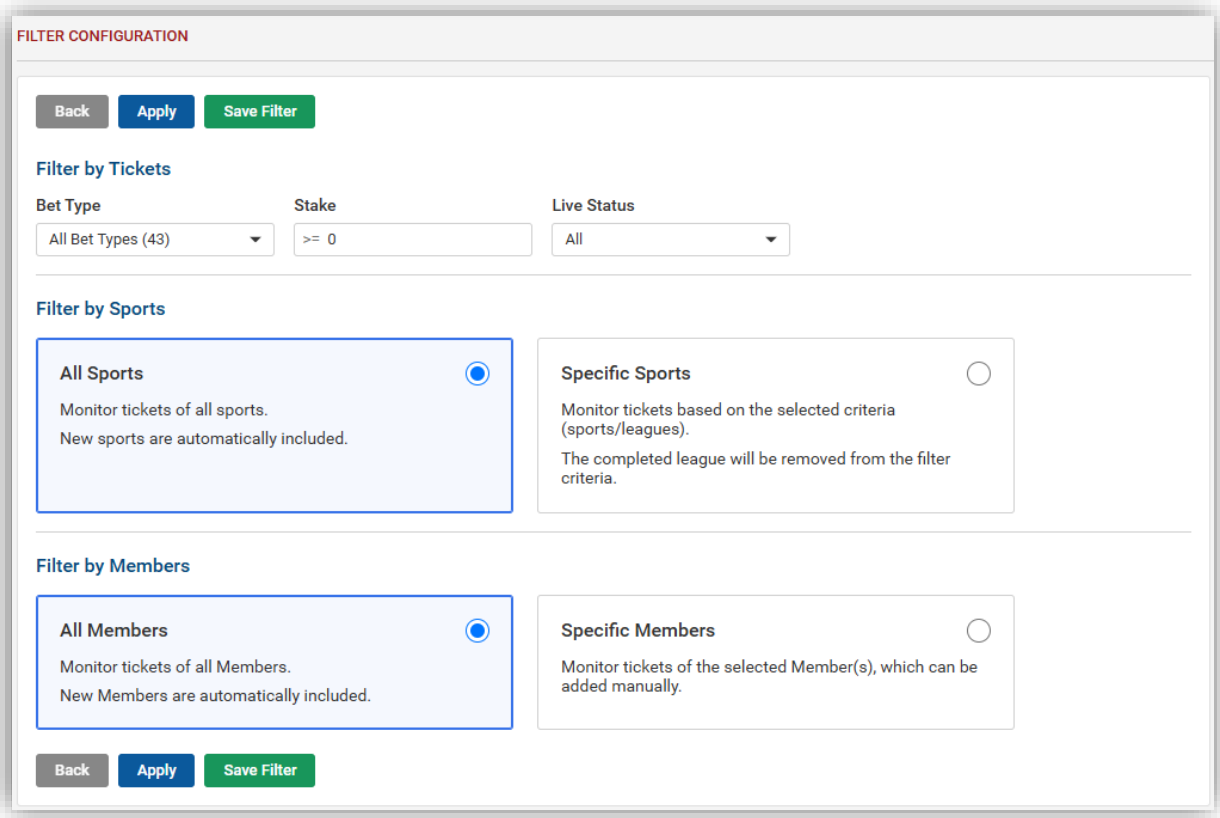

2.1. Configure Filters

To monitor bet tickets, begin by setting the filter criteria that meet your requirements. Once the filter is set, you can save it for future use and modify it as needed.

- To do so, go to **Main Menu > Bet Lists > Last Bets**:
- Then click **Filter Configuration**:

- You will see the following set of criteria:

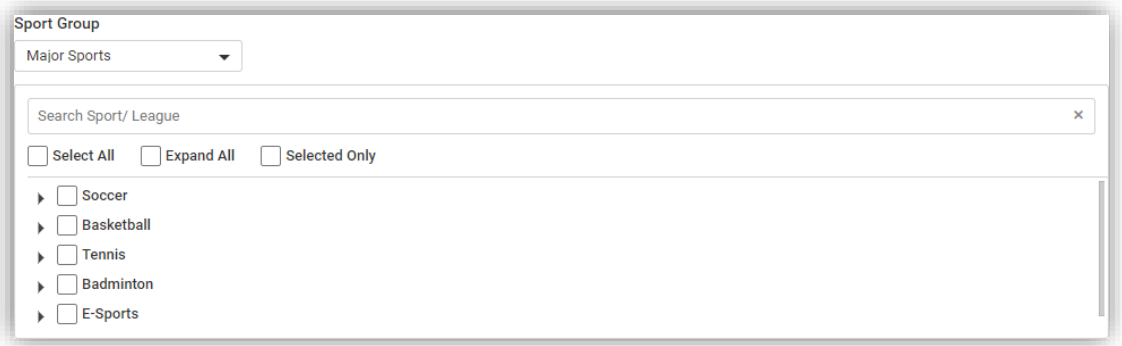

– **Filter by Tickets**:

  - **Bet Type**: monitor tickets with the selected bet types.
  - **Stake**: monitor tickets with stakes equal to or greater than the specified amount, this way, you can focus on high-stake tickets only.
  - **Live Status**: monitor tickets based on their Live Status. By selecting Live or Non-live tickets, you can narrow down the filter result.
    - ✓ **Live**: monitor tickets that were placed while an event is ongoing.
    - ✓ **Non-Live**: monitor tickets that were placed before an event takes place.
    - ✓ **All**: monitor tickets with all statuses (Live and Non-Live).

– **Filter by Sports**:

  - **All Sports**: monitor tickets for all sports. New sports are automatically included.
  - **Specific Sports**: monitor tickets for the selected sports/leagues to narrow down the filter result:

    - ✓ **Sport Group**: include a wide variety of sports separated into the following:
      - **Major Sports**: popular sports such as soccer, basketball, tennis, badminton, and e-sports.
      - **Minor Sports**: any sports other than major sports.
      - **All**: include both major and minor sports.
    - ✓ **Search Sport/League**: find specific sports/leagues to monitor by entering related keywords.
    - ✓ **Select All**: select all sports/leagues in the list.

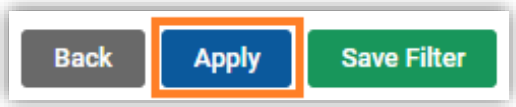

- ✓ **Expand All**: expand all sports/leagues in the list.
- ✓ **Selected Only**: only display the selected sports/leagues.

– **Filter by Members:**

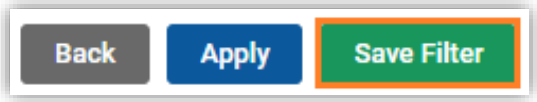

- ➢ **All Members:** monitor tickets of all Members. New Members are automatically included.
- ➢ **Specific Members:** monitor tickets of specific Members to identify their betting patterns and take appropriate actions accordingly. Members can be added manually, after which you can select a Member from the dropdown list.
  Note: You can search only by the username of Members (including Direct Members), not by the username of agents.

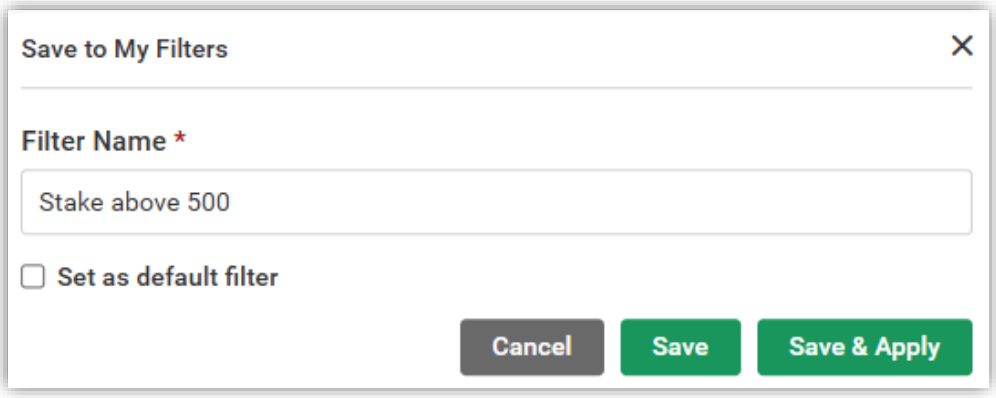

- After setting the criteria, you can click **Apply** to use the filter immediately. Filters applied without saving are archived as 'Unsaved Filter' in the Manage Filters function.

- Alternatively, save the filter for future use by clicking **Save Filter:**

– Enter the filter name:

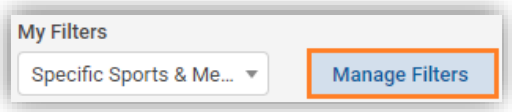

– When selecting "**Set as default filter**", the selected filter option will be automatically applied whenever you access the Last Bets function.

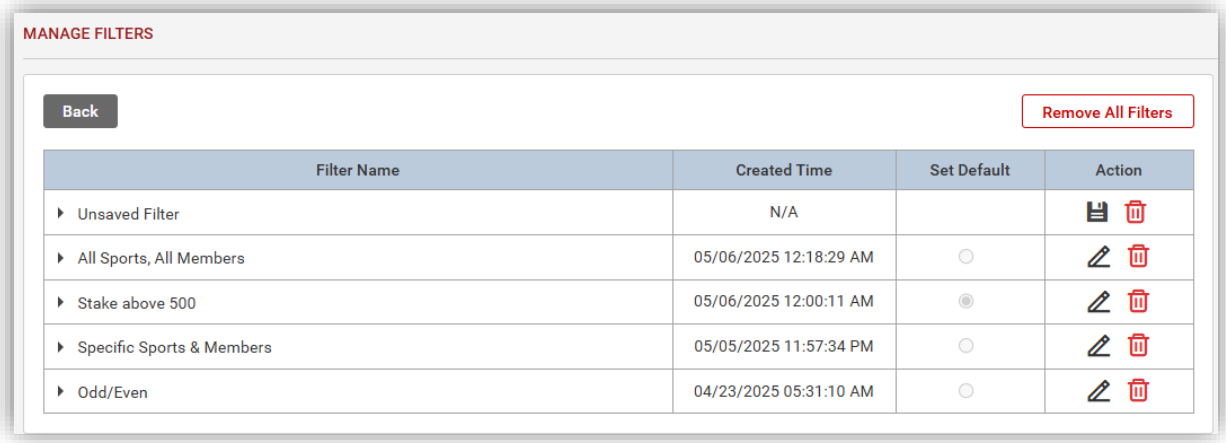

– You can save and apply the filter by clicking "**Save & Apply**". Alternatively, simply click "**Save**" to save the filter for future use.

2.2. Manage Filters

All generated filters are archived in the **Manage Filters** function. To manage filters, go to **Main Menu > Bet Lists > Last Bets**, and click **Manage Filters**

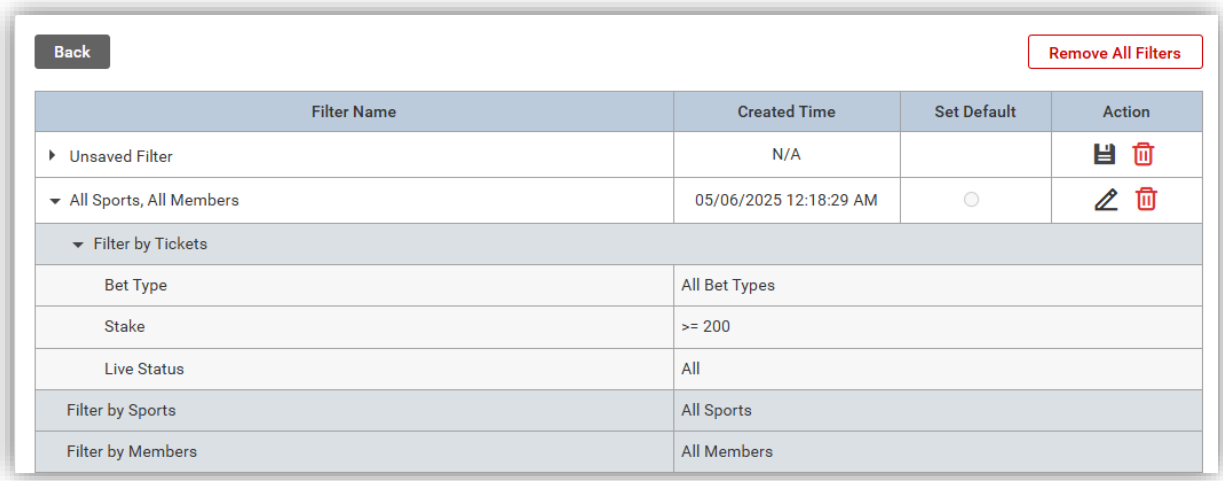

You will see the following filter list together with a group of actions to manage the filter list:

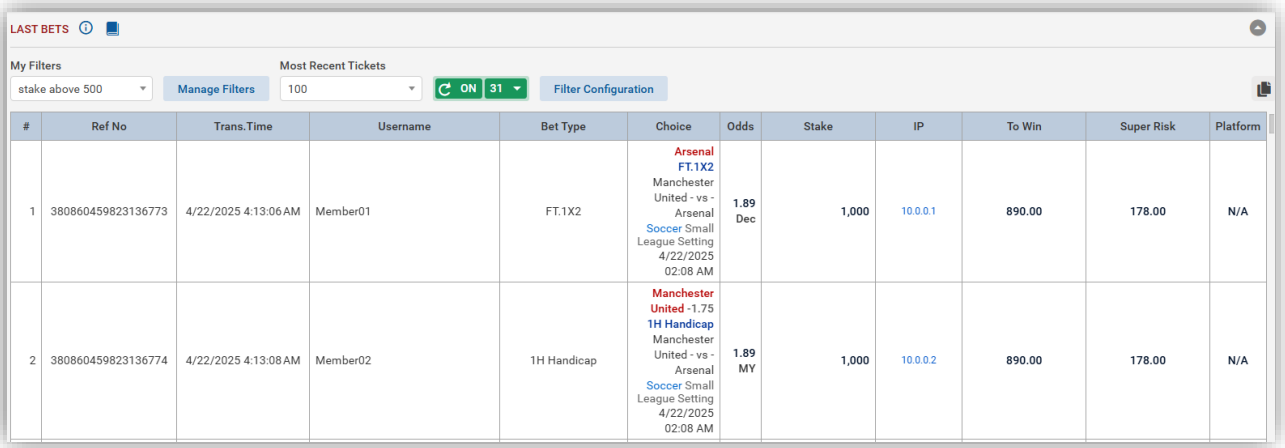

- **Save** : name and save the unsaved filter.
- **Remove** : delete a filter from the list.

- **Edit** ✎: rename or set the filter as default.
- **Remove All Filters**: delete all filters from the list.
- **View Details**: by clicking the filter, you can see its specific filter criteria and created time:

2.3. Monitor Tickets

After setting the criteria and applying the filter, the filtered tickets will show up on the monitoring page:

- **My Filters**: the default filter will be shown first, you can choose one filter from a list of pre-defined filters to apply another filter.
- **Most Recent Tickets**: show the 100, 300, or 500 most recent bet tickets.
- **Auto Refresh**: enable automatic updates to the list at intervals of 30, 60, or 90 seconds.
- **Copy**: generate an HTML-based copy of the list.
